

Some plastics take 10 to 1,000 years to decompose, and every year, the world produces over 300 million tonnes of plastics.

What do we do with our plastic wastes while we wait for landfills to clear out?

We recycle them, of course!

**Winder Recycling Company** seeks to reduce the amount of plastic wastes that end up in landfills by recycling single-use plastics (candy and food wrappers, grocery bags, shampoo sachets, and PET bottle) into sustainable furniture and other products.

*"Did you know that by recycling 300 pieces of plastic bottles or 10,000 pieces of candy wrappers, we can produce one school chair? Through recycling, we can save a three-year-old tree from being destroyed."*

**WINCHESTER O. LEMEN**  
Company President
